

USIS Security Solutions

COMBINING THE POWER OF TECHNOLOGY WITH HIGHLY SKILLED PROFESSIONALS

USIS has deployed security solutions across the federal government for nearly two decades. Our Security Solutions Division offers the resources and experience to effectively identify threats and vulnerabilities, mitigate risk, facilitate informed decision-making, and protect national security assets. In a range of settings, we combine the power of best-of-breed technologies (both COTS and proprietary) with highly qualified security professionals to support mission critical government programs, particularly in the areas of homeland security, defense, intelligence, and critical infrastructure.

Security Analysis, Planning, and Implementation: USIS is equipped to perform a client needs assessment, develop a strategic solution, and coordinate timely implementation. A key element of this offering is an infrastructure risk assessment that takes into account physical security, cybersecurity/information security, operational security, communication security, and security program policy development.

Intelligence Analysis and Watch Operations Support: USIS understands that information acquired through proactive monitoring and analysis is critical to preparation for a potential crisis and risk mitigation. USIS Watch Officers provide around-the-clock support during ongoing tactical missions and national or international special security events, or during the pursuit of developing credible threats to the United States. USIS Intelligence Analysts and Watch Officers monitor and review current, multiple source intelligence; research and analyze the intelligence; conduct threat analysis; create terrorist threat briefings; conduct assessments; develop specialized products in response to emerging terrorist threats; and maintain I&W, tactical, operational, and analytical liaison with intelligence and law enforcement communities.

Construction Surveillance: USIS employs a cadre of highly skilled construction surveillance technicians (CSTs) with security clearances up to top secret. Many of our experts are bilingual or multilingual, and they are all knowledgeable in a range of construction disciplines such as architectural, mechanical, electrical, and electronic engineering principles. In addition, our CSTs have a range of relevant expertise in construction security surveillance, technical surveillance countermeasures, counterintelligence, quality assurance, and hands-on supervisory construction experience. Our CSTs not only monitor the site to protect against threats, but also ensure that construction crews follow appropriate protocol and install protective elements properly.

An Altegrity Company

Schedule 84 categories:

- Security Specialists (I-VIII)
- Functional Analysts (I-IV)
- Program Managers (I-IV)
- Admin Specialists (I-IV)

Counterintelligence (CI) Solutions: USIS provides counterintelligence solutions as well as polygraph examinations and evaluation and analysis of polygraphs for the U.S. government. USIS polygraph examiners work closely with their federal counterparts to conduct and evaluate polygraph results and conduct comprehensive counterintelligence evaluations on federal personnel who are assigned to “high risk” programs and offices. Using polygraph results, personnel review security files and records searches to identify CI-related issues or concerns.

Program Management and Staffing Support: USIS can augment your security program by providing the right skills at the right time to accomplish your mission. We offer professionals to staff the following functions:

- » Personnel Security Processing
- » Adjudications and Adjudications Support
- » Physical, Operational, and Communication Security
- » Background Investigations and Background Checks
- » Counterintelligence and Intelligence Analysis
- » Logistics and Acquisition Support
- » Security and Construction Surveillance Monitors
- » Access Control
- » Technical Security
- » Administrative Support
- » Budget and Finance Support
- » Call Center/Help Desk

Special Security Support: USIS provides Special Security Officers to control access to Sensitive Compartmented Information Facilities (SCIFs) and safeguard all classified information and associated infrastructure, including Sensitive Compartmented Information and Special Access Programs.
